Pre-mixed cementitious filler for fair face repair

PRODUCT
weberep 360 FFR is a dry pre-mixed polymer-modified cementitious coating based on hydraulic binders, siliceous filler, water retaining agents and other admixtures. weberep 360 FFR is available in white and light-grey.

SCOPE OF USE
weberep 360 FFR is used as a render in one or two coats, on walls and ceilings in internal and external conditions. It can be used to fill pinholes prior to over coating, for general repro-filling over large areas, up to 3 mm depth and fairing coat.
weberep 360 FFR can be used to fill superficial cracks in concrete and plasters.

ADMISSIBLE SUBSTRATES
Concrete and masonry surfaces.

ASSOCIATED COATINGS
weberep 360 FFR can be covered with:
• Texture coatings
• Paints
• Wallpaper

Results obtained at 20 kg bag with 5.4 L (6.4 L in KSA & 6 L in Kuwait) water under lab condition at 22°C ± 1

APPLICABLE STANDARDS
ASTM D 4541
BS EN 196-1 - BS EN 12190
ASTM C 307- 94

INSTRUCTIONS FOR USE
PREPARATION OF SUBSTRATE
The substrate should be sound, clean free from any dust or demoulding products and oils. Roughen the surface to remove any laitance. The surface should be moistened in hot weather. It should not be overheated or frozen.

PRODUCT PREPARATION
The weberep 360 FFR paste is obtained by mixing a 20 kg bag with 5.4 to 7 litres of clean cool water, using a suitable mixer. The paste should be mixed vigorously until fully homogeneous. Clean tools with water immediately after use.
Ideal application temperature is between + 5ºC and + 35ºC. If the application temperature is higher than 35 ºC, make sure to use cool water to keep the mixed mortar temperature below 30 ºC.

PRODUCT APPLICATION
Apply the paste with a steel trowel. It should be allowed to partly set before smoothing. If a very smooth finish is required, a small amount of water may be sprayed on to the

INSTRUCTIONS FOR USE
PREPARATION OF SUBSTRATE
The substrate should be sound, clean free from any dust or demoulding products and oils. Roughen the surface to remove any laitance.
The surface should be moistened in hot weather. It should not be overheated or frozen.

PRODUCT PREPARATION
The /logo_weberep 360 FFR paste is obtained by mixing a 20 kg bag with 5.4 to 7 litres of clean cool water, using a suitable mixer. The paste should be mixed vigorously until fully homogeneous. Clean tools with water immediately after use.
Ideal application temperature is between + 5 ºC and + 35 ºC.
If the application temperature is higher than 35 ºC, make sure to use cool water to keep the mixed mortar temperature below 30 ºC.

PRODUCT APPLICATION
Apply the paste with a steel trowel. It should be allowed to partly set before smoothing. If a very smooth finish is required, a small amount of water may be sprayed on to the surface of the /logo_weberep 360 FFR prior to final smoothing.

CURING
/logo_weberep 360 FFR should be cured with clean water for at least three days by spraying twice a day.

CONSUMPTION
1.3 kg/m² per 1 mm thickness.

Yield
Approximately 15 L / 20 kg bag

STORAGE
12 months after manufacturing date in original and non-open packaging, under cover, in dry condition, away from humidity, protected from extreme temperatures and direct sunlight.

SAFETY PRECAUTIONS
The product contains cement powders which, when mixed with water, release alkalis that could be harmful to the skin. It is preferable that the application be done in a ventilated area, and to wear protective gear for hands, eyes and respiratory system and to avoid breathing of the dust. Splashes on the skin should be washed away by cleaning thoroughly with soap and water. In case of contact with eyes, wash thoroughly with clean water and seek medical attention. If swallowed, do not induce vomiting and seek medical attention. The product is non-flammable.
